# styled-components

```
import React from 'react';

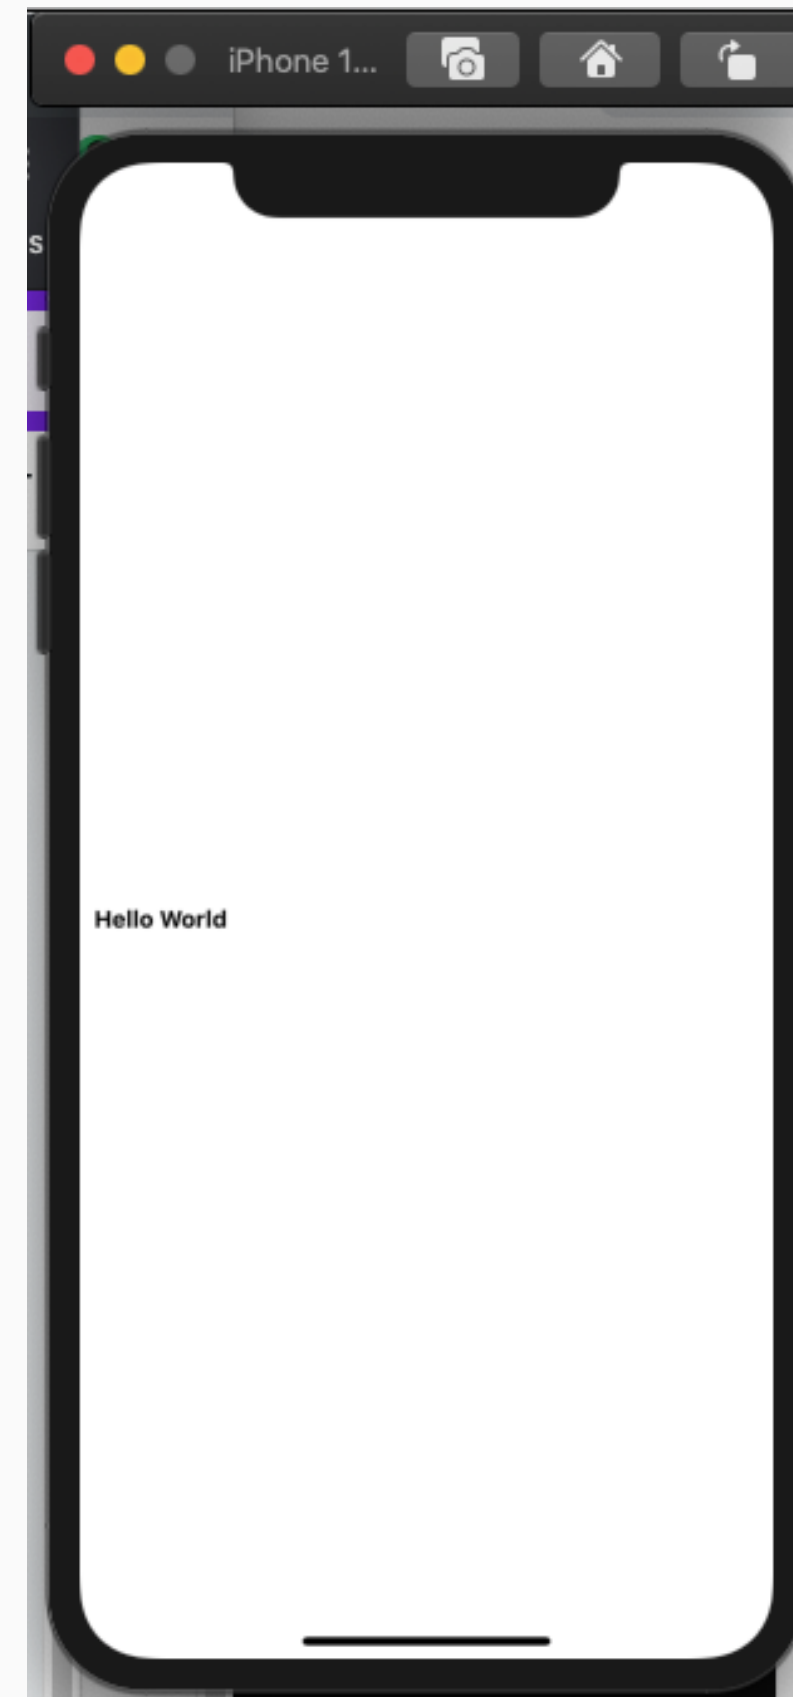

import styled from 'styled-components/native';

interface Props {
  bold?: boolean;
}

const Title = styled.Text<Props>`
  ${({ bold }) => bold & { 'font-weight': 'bold' }};
`;

const Typography = () => {
  return <Title bold={true}>Hello World</Title>;
};

export default Typography;
```

# Elegância

w/ jsdoc

```
/**
 * ...
 * Example: <TextButton text="Hello World" disabled={true} />
 * ...
 */
const TextButton = ({ text, disabled }: Props) => {
  return (
    <Container disabled={disabled}>
      <Label>{text}</Label>
    </Container>
  );
};
```

```
const TextButton = ({ text, disabled }: Props) => {
  return (
    <Container disabled={disabled}>
      <Label>{text}</Label>
    </Container>
  );
};

(alias) const TextButton: ({ text, disabled }: Props) => JSX.Element
import TextButton

Example: <TextButton text="Hello World" disabled={true} />

Property 'text' is missing in type '{}' but required in type 'Props'. ts(2741)

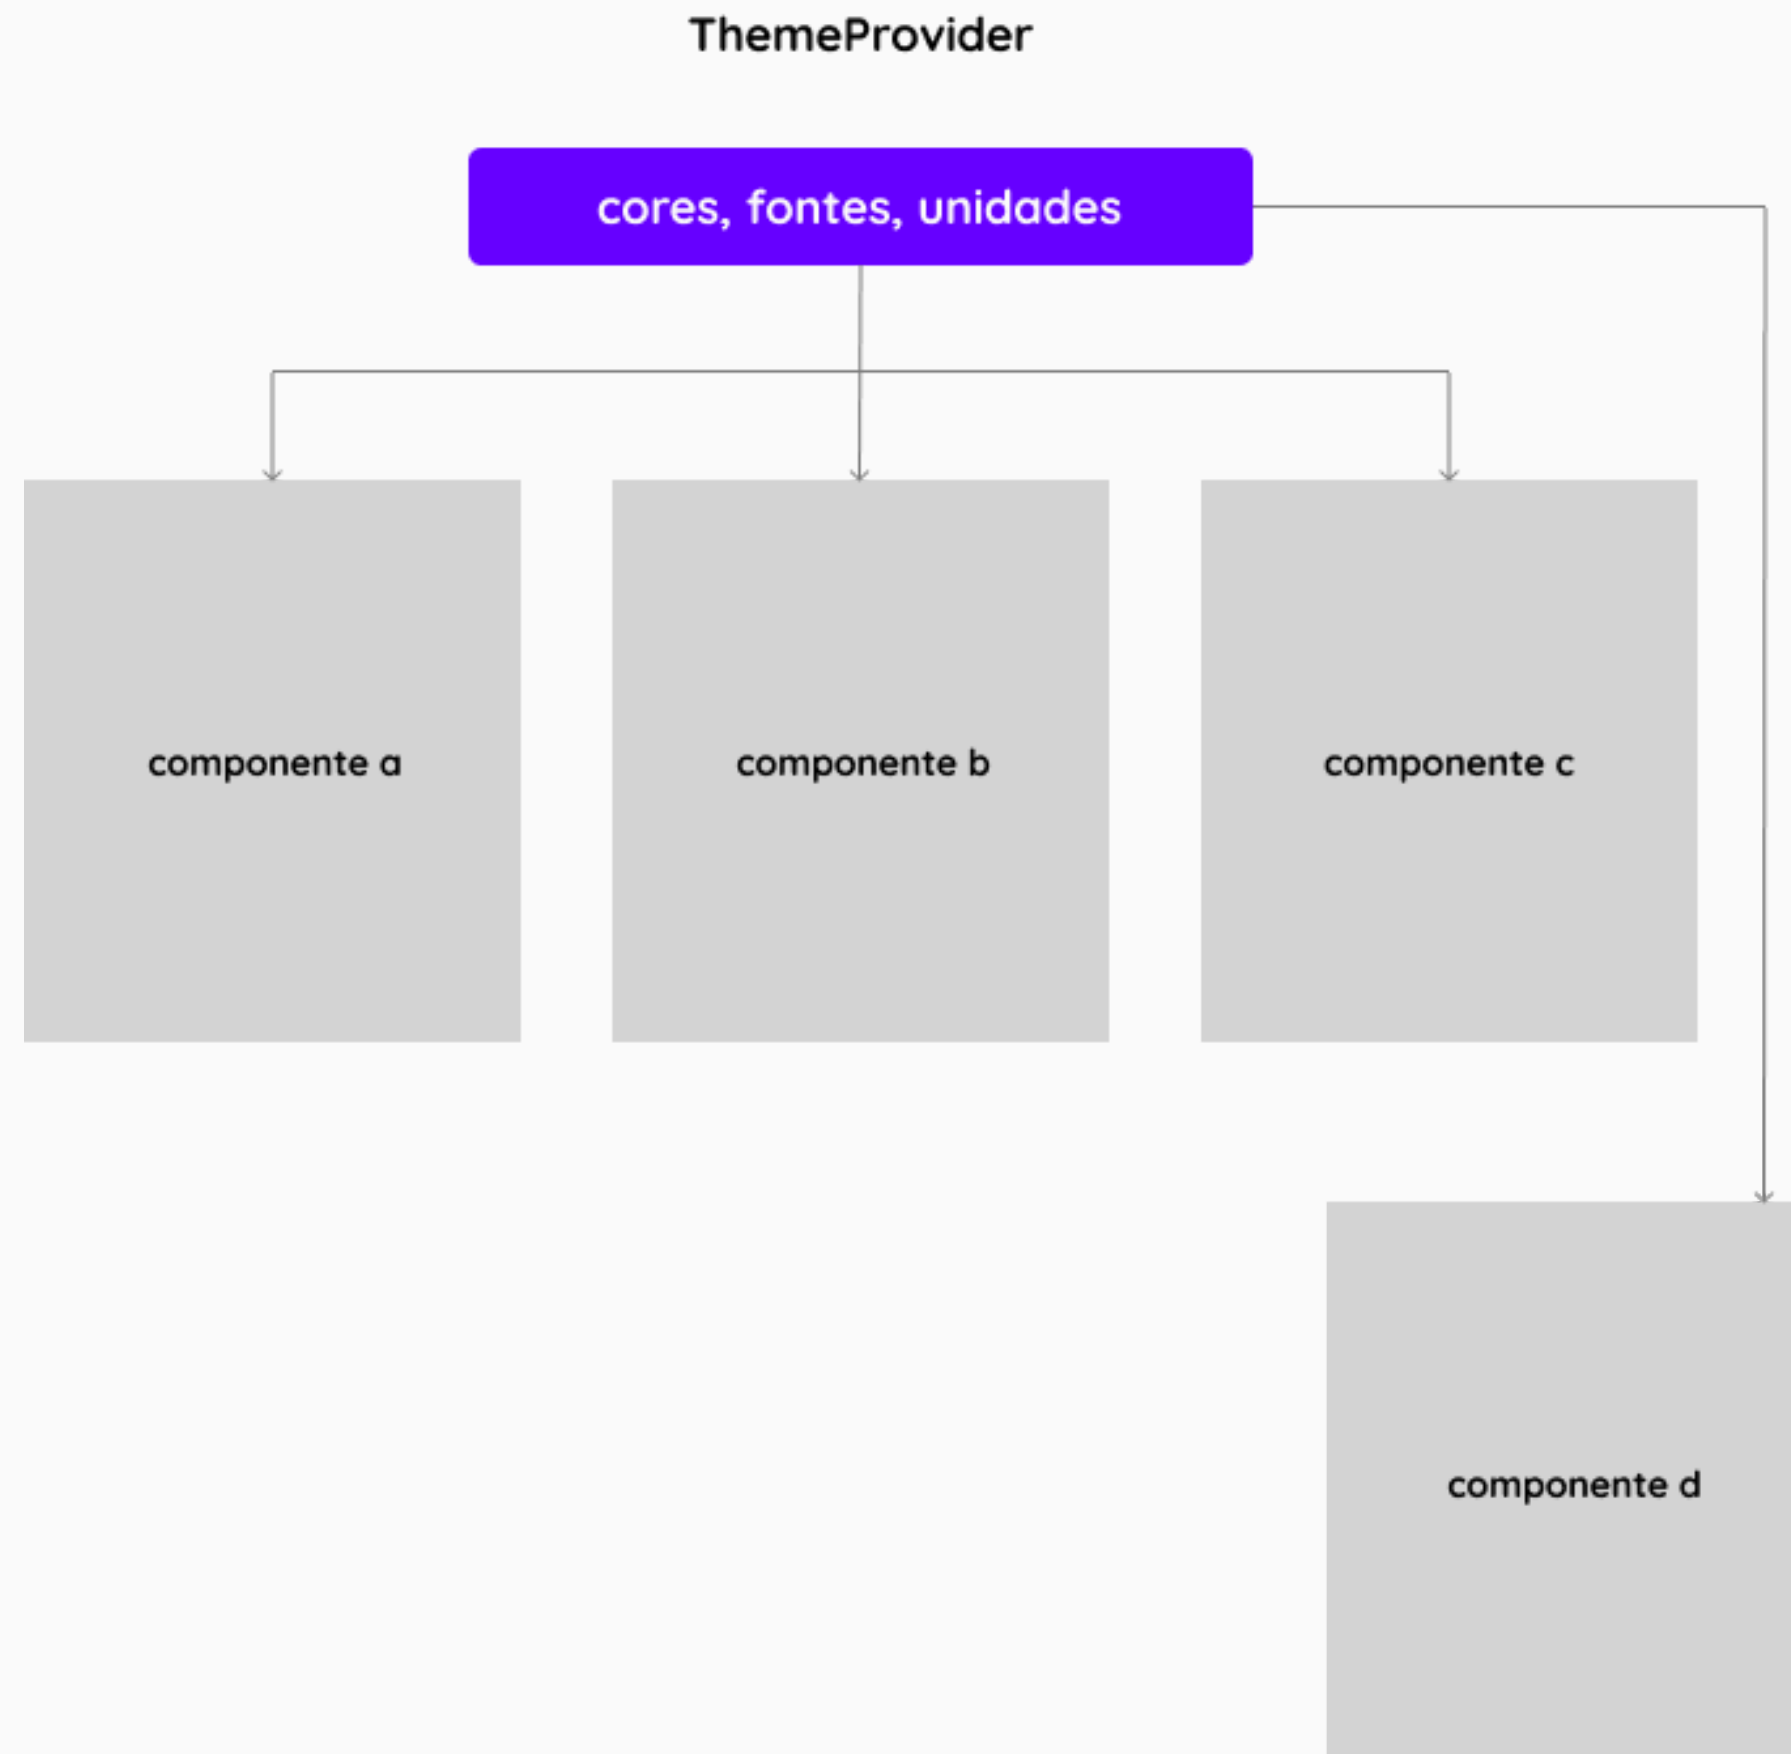

interface ts(2, 3): 'text' is declared here.
<TextButton />
```
